

ABEEHA AAMIR

AI AUTOMATION ENGINEER & BACKEND SYSTEMS ARCHITECT

Bahawalpur, Pakistan | 0329-8891430 | abeehaa5550@gmail.com

[GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

AI Automation & Backend Engineer specialized in building production-grade backends and intelligent automation platforms. Expert in shipping scalable systems that replace manual operations with self-healing, data-driven pipelines. Committed to engineering excellence, system observability, and robust API architecture.

TECHNICAL COMPETENCIES

Backend: Python, Django, Django REST Framework, FastAPI | **AI Automation:** Workflow Orchestration, Agentic Systems, API Integration, PDF Data Extraction | **Data & Infrastructure:** PostgreSQL, Redis, Docker, Linux, CI/CD, Security Hardening

PROFESSIONAL EXPERIENCE

AI Automation Engineer & Backend Systems Architect 2025 – Present

- Architect and deploy intelligent workflow automation systems, integrating disparate software services to optimize enterprise data flow.
- Develop custom backend-driven automation logic to reduce manual intervention in complex business processes with high observability.
- Design and maintain secure, scalable server-side architecture using Python and related frameworks with clean API contracts.
- Implement performance optimization strategies, including database query tuning and asynchronous task management for high-availability.

FEATURED PROJECTS

Hostyo - Property Management Portal

- Developed a full-stack owner portal providing real-time visibility into reservations, payouts, and financial dashboards with real-time synchronization.

HubSpot Email Scraper & Importer

- Engineered a high-volume automated pipeline to scrape, validate, deduplicate, and import enriched contact data into CRM systems.

Borrower Concierge AI Agent

- Built a multi-step intelligent agent for the lending sector to automate document analysis and provide personalized borrower guidance.

Business Lending Document Auditor

- Developed an AI-powered system designed to audit lending documents with high accuracy, ensuring compliance and structured risk assessment.

Automated Owner Payouts Pipeline

- Created a production-grade automated reconciliation and payout system, featuring multi-account segregation and full audit trails.
